

## High Hazard Tablet Facility-Astra Zeneca

**Location:** Charnwood, Loughborough

**Project:** Internal Fit Out of Research Building

**Project Length:** 20 weeks

### Information:

Astra Zeneca, a global Pharmaceutical Company, has undergone a large project to design & build a new high hazard tablet facility at an overall cost of £22 million. To incorporate new offices, and a production area for high hazard tablet production.

We were part of a contracting team which developed the facility. Building Projects UK Ltd's scope was the full construction and fit out of all partitions, ceilings and cleanrooms. The offices were created within an existing fallow area, incorporating desk areas, quiet rooms & meeting rooms. This work was required to be completed prior to the production element, as the current office area was located in the area of the proposed new production area. Building Projects completed all the partitioning & ceilings for the offices incorporating vision panels & door sets. The offices are now fully operational.

The project was completed ahead of schedule and the client was particularly impressed with our standard of Health & Safety, workmanship and site cleanliness of our operatives. We were awarded a prestigious alliance safe contractor award for the professional and high standard of Health & Safety that was employed by ourselves.
