

Case Study

Air Conditioning – Stansted Airport

Location: Stansted Airport

Project: Air-conditioning and Ventilation

Project Length: 4 Weeks

Information:

Building Projects UK Ltd's Air Conditioning department were contracted to supply and fit a cooling only system to Hertz car hire help desk in the main arrivals terminal at Stansted Airport.

Utilisation of the central chilled water cooling system provided by British Airport authority was necessary. The whole of the pipework installation was required to be of a flameless nature, using only screwed and compressive fittings and jointing systems.

The works were carried out on behalf of Mentha & Halsall Shopfitters Ltd.

The work was scheduled in a tight fit out schedule whilst the airport was still in operation and existing equipment was live.

The equipment was to benefit sales, support staff, customers and the IT communications room.

A very strict Health, Safety and security scheme was enforced throughout the project.
